[Overview]

```json
{
  "project":    "CODERS - Social Media App",

  "overview":   "A social media platform where users

                 can register, create posts, find friends,

                 and interact with each other's content. "
}
```

[Scan it now!]

Check out the app now!
Register your account,
create a post, find a
friend, and comment on
their post.

[Features]

```
"features": [
        "User registration and authentication",
        "CRUD operations for posts, comments, and likes",
        "Friendship management",
        "Admin dashboard for managing users, posts, and comments",
        "Real-time updates and email notifications",
        "Local weather information",
        "Password validation during registration, change, and reset",
        "Token generation for password reset",
        "Filter of bad speech"
        ]
```

Description

As a registered user, I want to log in to my account so that I can access my profile and interact with other users.

1. The user can log in using their username and password.
2. The system should display an error message for invalid login attempts.
3. The user should be redirected to their profile page upon successful login.
4. Implement session management to keep the user logged in across pages.
5. User can log out from any page within the application.
